

1. Professional Tooling & Environment

Before writing code, students will set up a professional-grade development environment:

- **IDE:** Visual Studio Code (VS Code) with essential extensions (Live Server, Prettier, ES7+ Snippets).
 - **Version Control: Git & GitHub** for tracking code changes and collaboration.
 - **Deployment: Vercel** for instant "Push-to-Deploy" hosting and CI/CD (Continuous Integration/Continuous Deployment).
-

2. Core Curriculum Modules

Module 1: Structural Foundation (HTML5)

- Semantic HTML5 for SEO and Accessibility (<main>, <article>, <section>).
- Form architecture and data collection (Inputs, Labels, Validations).
- Integrating external assets (Images, SVG, Video).

Module 2: Modern Styling & Layout (CSS3)

- **Basic Layouts:** Deep dive into **CSS Flexbox** and **CSS Grid**.
- **Responsive Web Design:** Mobile-first approach using Media Queries.
- **The Box Model:** Mastering margins, padding, and border-box sizing.

Module 3: Dynamic Interactivity (JavaScript ES6+)

- **Fundamentals:** Logic, Loops, Functions, and Object-oriented concepts.
 - **DOM Manipulation:** Selecting and modifying HTML elements dynamically.
 - **Asynchronous JS:** Working with APIs (Fetch API) to load external data.
 - **Event Handling:** Responding to user actions (clicks, form submissions, scrolls).
-

3. The Modern Workflow (Deployment & Automation)

This module bridges the gap between a "local project" and a "live website."

- **Git Workflow:** Learning `git add`, `git commit`, and `git push`.
- **Vercel Integration:** Connecting a GitHub repository to Vercel for automatic deployment.
- **Environment Variables:** Securely managing sensitive data (like API keys).
- **Performance Optimization:** Learning how to score high on Google Lighthouse.

4. Capstone Project: "The Professional Portfolio"

Students will build a final project that serves as their digital resume.

- Fully responsive (Desktop, Tablet, Mobile).
 - Functional contact form (using **Formspree** or **Vercel Functions**).
 - And many other feature's
 - Live URL hosted on **Vercel**.
-

Course Duration: 12 Weeks (3 Months)

Recommended Pace: 1-2 or 1-3 hours of study per week.

Month 1: The Visual Foundation

- **Week 1-2: HTML5 Deep Dive.** Semantic tags, forms, and document structure.
- **Week 3-4: CSS3 Basics.** The Box Model, colors, typography, and simple layouts.
- *Milestone:* Build a static "About Me" page.

Month 2: Responsive Design & Logic

- **Week 5-6: Advanced Layouts.** Mastering Flexbox and CSS Grid.
- **Week 7-8: JavaScript Fundamentals.** Variables, functions, and making the page "think."
- *Milestone:* Make the "About Me" page responsive for mobile phones.

Month 3: Modern Workflow & Deployment

- **Week 9-10: Git & GitHub.** Learning version control and pushing code to repositories.
- **Week 11: Vercel & Optimization.** Deploying the site live and checking performance scores.
- **Week 12: Final Capstone Project.** Completing the professional portfolio and presenting it.

Summary of this Bootcamp:

"This 12-week program is designed to take a student from zero knowledge to a published, professional portfolio. By focusing on the 'Essentials' and utilizing modern tools like Vercel, etc. students don't just learn to code—they learn how to build for the real world."
